

Texas Engineering Experiment Station and Dwight Look College of Engineering

Safety Policy

Safety is the responsibility of all administrators, faculty, staff, and students employed by TEES or enrolled in the College of Engineering. A safe environment begins at the operational level: the student at the fume hood, the staff member in the shop, the researcher at the lab bench, etc. The workers in these areas have the first level of responsibility; their attitudes, work habits, and understanding of their responsibility are critical to a safe environment. The faculty and immediate supervisors of the students and staff have the next level of responsibility and must instill safety traits in their laboratory, shop, and office personnel. The administration must provide encouragement and leadership in safety and must address safety problems/issues identified by students, staff, and faculty. This conscientious and shared responsibility is at the core of a safe work environment.

"Engineers shall hold paramount the safety, health, and welfare of the public in the performance of their professional duties."
