Engineering Projects in Community Service
Brazos Valley Center for Independent Living (BVCIL) Project

Project Goal

This project proposes the development of a web-based application that would be installed at the entrance of the BVCIL office in Bryan and improve the efficiency of checking in new and repeat clients. The on-line tool should provide the administrators with a dashboard to view the number of consumers serviced and generate various strategic reports that will assist them in servicing their consumers better.

Impact on Community

This project would not only assist the BVCIL center to service their consumers better but also would assist the BVCIL centers in the entire county to function together to help impact the community better.

Desired Majors

Computer Science, Computer Engineering and students from all other majors with relative experience.
